## COVER CROPS, GRAZING MANACEMENT

NATURAL RESOURCES CONSERVATION SERVICE

## manhaing grass by growing points

- When the growing point is removed, new lateral buds must develop to produce new leaves.
- This delays above-ground regrowth and may stop root growth.
- When grazed in the vegetative phase this encourages tillering near the buds allowing plants to cover more basal area filling pastures.
- Overall the goal in grazing management is to align plant demands which if utilized correctly can maximize animal weight gains and profits.

## NRCS 50-50\% RULE OF THUMB FOR RANGELAND

$100 \%=$ Total Production

## BASICS OF GRAZING MANAGEMENT

- Stocking rate
- The number of animals on a given area of land over a certain period of time
- Livestock rotation
- Rotation includes managing when you graze, how long you graze, and how long you allow the area that is grazed to rest and recover before the area is grazed again
- Utilization rate
- Refers to the grazing intensity
- Often described as how heavily an area is grazed
- Plant rest and recovery
- Allow for rest and recovery of your grasses and you will be rewarded with higher producing pastures and healthier, fastergaining animals

## TYPICAL STOCKING RATES FOR OUR AREA

Forage Available

- Rangeland
- Typical forage can produce $1,000 \mathrm{lbs}$ /acre
- Taking only 25\% - 50\% ~ Harvest Efficiency
- Math - $1,000 \mathrm{lbs} / \mathrm{ac} * 0.25 \mathrm{HE} / 912.5 \mathrm{lbs}=0.27$ AUM's/ac
- l ac /0.27 AUM's/ac = 3.7 acres per AUM at 25\% HE, 1.8 acres per AUM at 50\%
- Pastureland
- Typically forage can produce $2,000 \mathrm{lbs} /$ acre
- Taking only 25\%-50\% ~ Harvest Efficiency
- Math $-2,000 \mathrm{lbs} / \mathrm{ac} * 0.25 \mathrm{HE} / 912.5 \mathrm{lbs}=0.55$ AUM's/ac
- 1 ac /0.55 AUM's/ac = 1.8 acres per AUM at 25\% HE, 0.9 acres per AUM at $50 \%$

Forage Demand
AU-Animal Unit is equivalent to one 1000-pound cow.
AUM—Animal Unit Month is the amount of forage
necessary to carry one Animal Unit (AU) for one month.
AUMs/AC—Animal Unit Months per acre
Animal Unit Equivalents (AUEs)
Weight Cow or Cow/Calf Pair (Assuming a 1000\#
cow) $=1.0$
Ewe $=0.15$
Bull (1800\#) $=1.8$
Lamb (12 Months) $=0.1$
Weaned Calf $(500 \#)=0.5$
Ram $=0.2$
Heifer/Steer (13-18 Months or 700-900\#) $=0.7-0.9$ Goat $=0.15$
Heifer/Steer (19-24 Months or 900-1100\#) $=0.9-1$
Other Animals $=0.1$ AU for Each 100\# of Body

# USING PLANT HEIGHT TO DETERMINE WHEN TO MOVE AND HOW LONG TO REST 

| Plant Species | Minimum Plant Height (inches) |  |
| :--- | :---: | :---: |
|  | Pasture turnout <br> acceptable | Remove animals <br> and rest pasture |
| Alfalfa | $6-10$ | $3-4$ |
| Brome, smooth | $5-8$ | $3-4$ |
| Fescue, Tall | $5-8$ | $3-5$ |
| Fescue, Creeping Meadow | $5-10$ | $3-5$ |
| Kentucky Bluegrass | $3-5$ | $2-4$ |
| Orchardgrass | $5-8$ | $3-5$ |
| Sideoats, Grama | $4-5$ | $2-4$ |
| Switchgrass | $8-10$ | $6-8$ |
| Timothy | $4-6$ | $2-4$ |
| Wheatgrass, Crested | $4-6$ | $2-4$ |
| Wheatgrass, Intermediate | $5-8$ | $3-5$ |
| Wheatgrass, Pubescent | $5-8$ | $3-5$ |
| Wheatgrass, Western | $5-8$ | $3-5$ |
| Wheatgrass, Tall | $8-12$ | $5-8$ |

How long is a pasture allowed to recover after a grazing event?

- Less than 30 days.
- Dryland pastures in Colorado typically need more than 30 days to regrow after grazing.
- Depends on the time of year, grass growth cycle, and precipitation received.
- 30-45 days is recommended during the fast growth period (typically May and June in Colorado). Drought conditions will extend regrowth time.
- $60-90$ days is recommended during the slow growth period (typically July to October in Colorado). Drought conditions will extend regrowth time

## TOOLS TO HELP WITH GRAZING MANAGEMENT

## GRAZING MANAGEMENT TOOLS - TIMED GHTE RELEASE

- Batt-Latch - Timed gate release
- Great for remote locations
- More efficient use of time and labor on
- Solar Powered
- Rugged and waterproof
- Stock move on their own time into the new pasture

## TYPICAL RANGE AND PASTURE IMPROVEMENTS

## GRAZING IIIANAGEIMEN'I' 'IOOLS - PORI'ABLE TANKS

Plusson - Quick Connect allows for easy movement of stocktank and stockwater

Up to 140 PSI rating
Developed in Australia

## GRAZING MANAGEMENT TOOL RESOURCES

- Battlatch - https://www.americangrazinglands.com/products/batt-latch-gate-release-timer
- https://msffarm.com/fence-products/batt-latch.htm
- \$395
- Plasson Quick Connect Coupler for Temporary movable stockwater
- https://www.youtu.be.com/watch?v=kczaxzMFO-A
- https://www.americangrazinglands.com/products/quick-coupler-valve-3-4
- \$10.95 - single Quick-Coupler

## MONITORING TOOLS - LIVESTOCK NUTRITION

 AND FORAGE QUALITY- NUTBAL
- Fecal analysis to determine
- Quality of the grass or hay consumed 36 hr prior to defecating
- \% crude protein(CP) - Forage crude protein levels below 6 to $8 \%$, forage intake decreases
- \% digestible organic matter (DOM) - measure of energy as in total digestible nutrients Less than $66 \%$ feed
- Fecal nitrogen (FN) and Fecal phosphorus - FN and FP refer to the proportion of these minerals in the manure
- Good analysis of $N$ and $P$ levels going back into soils
- Analysis includes a CP/DM to look at ruminant efficiency
- Analysis includes trend analysis of expected BCS if on the same feed
- Really good analysis of feed quality if you are considering the most cost effective supplements that may be needed for your livestock goals
- NUTBAL allows managers to assess a problem, formulate a solution, and move on to other pressing issues
- Cost - \$45 per fecal sample or $\$ 80$ for advisor report
- Shipping will usually be around \$15-20 for 3 day priority
- One fecal sample can represent an entire herd
- To start call GANLAB to setup an account and get free kit sent over

## GRAZING MIONITORING TOOLS AND SERVICES OFFERED BY NRCS

- Monitoring Methods
- Stubble Height
- Rangeland Health
- Utilization
- Proper functioning condition
- Pastures Condition Score
- Productivity (pre-grazing forage)
- Residual (post-grazing forage)
- Nutrition (fecal analysis with NUTBAL)
- Grazing Response Index
- Streambank alteration (hoof shearing)
- Permanent photo plots
- Composition by annual production
- Composition (greenline)
- Structure and/or age class
- Cover - foliar and ground • Frequency
- Gap
- Density
- Soil stability
- Streamside stability (for riparian)
- Stream metrics (i.e. width, depth, substrate)

## EXAMPLE OF UTILIZATION CAGES

- T-3
- Post Grazing Season - 10/10/18

- Post Grazing Season - 11/5/19

## AUM'S SUPPIY/DEMAND SUMMARY BY PASTURE

Estimated Total AUM's of Forage Available - 2022

- 2,609 AUM's with 0.25 utilization or leaving over $75 \%$ of available grass for plant health and seasonal losses

## Estimated Total AUM's

 Demand- 8-26 Cow/calf Pair - May 15th to June 17th (l month grazed)
- 332 Yearlings - May 28th to September 19th (4 months grazed)

Estimated Season of use

- May to September (l to 4 months grazed)

| ALR Grazing Unit | Acres | Available <br> AUM's @ <br> 0.25 HE | Available AUD's <br> @ 0.25 HE | AUD's <br> Used | Number of Days Grazed | \% grazed based on AUD's used and season of use | \% grazed based off Utilization cages |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Elk Ridge | 1,925 | 486 | 2,847 | 1,557 | $\begin{gathered} 34-35 \\ \text { days } \end{gathered}$ | 45\% | 13-26\% |
| Ponderosa Hill | 2,642 | 1,032 | 30,972 | 14,873 | 56 days | 52\% | 27-47\% |
| Coyote Park | 1,563 | 634 | 19,035 | 9,306 | $\begin{gathered} 29-31 \\ \text { days } \end{gathered}$ | 51\% | 48-49\% |
| Alpine Meadows | 1,304 | 456 | 1,304 | 8,565.30 | $\begin{gathered} 11-30 \\ \text { days } \end{gathered}$ | >100\% | 41-53\% |

## COVER CROPS

## COVER CROP SELECTION TOOLS

- Design Seed mixes to the purposes of Cover Crop
- Erosion Control
- Increase Organic Matter
- Capture, recycle, redistribute nutrients
- Promote nitrogen fixation
- Weed Suppression
- Soil-borne pest suppression
- Provide supplemental hay
- Provide supplemental grazing
- Minimize or reduce soil compaction
- Attract beneficial insects

## CARBON TO NITROGEN RATIO PLANNING WITH COVER CROPS <br> - C:N ratio is the mass of Carbon to the mass of Nitrogen <br> - Optimum ratio is 24:1

- As a rule of thumb, the higher the ratio, the longer it takes for the material to decompose
- Likewise, the smaller the ratio is, the more rapidly the plant material will decompose.

| Material | C:N Ratio |
| :--- | :--- |
| Rye Straw | $82: 1$ |
| Wheat Straw | $80: 1$ |
| Oat Straw | $70: 1$ |
| Sorghum-Sudan Grass | $63: 3$ |
| Crimson Clover | 21.2 |
| Annual Ryegrass | 20.5 |
| Rotted Barnyard <br> Manure | $20: 1$ |
| Hairy Vetch Cover <br> Crop | $11: 1$ |
| Alfalfa | $11: 3$ |
| Ideal Microbial Diet | $24: 1$ |

## WHRM SEASON VS COOL SEASON PLANTS

Freeze Free Periods

## COOL SEASON GRASSES

- Annual Ryegrass
- Cereal Rye
- Barley
- Oats
- Wheat
- Triticale

Cereal Rye

## WARM SEASON GRASSES

- Pearl Millet
- German Foxtail Millet
- Sorghum-Sudan grass
- Forage Sorghum
- Teff

Brown rib sorghum - sudan grass

## COOL SEASON BROADLEAF

- Radish
- Turnip and Rape
- Kale and Collards
- Mustard
- Phacelia

## WHRM SEASON BROADLEAF

- Safflower
-Sunflower

## MIXES FOR INTENDED PURPOSES

- Increase Organic Matter
- Sorghum Sudan, Spring Barley, Annual Ryegrass, Pearl Millet, Spring Triticale, Spring Wheat
- Promote Nitrogen Fixation
- Chickpea, Cowpeas, Medics, Vetch's
- Suppress Weeds
- Spring Barley, Spring Triticale, Spring Wheat, Turnips, Sorghum Sudan, Cowpea's, Fenugeek, Vetch's
- Provide Supplemental Grazing
- Sugar Beets, Sorghum Sudan, Chickpea, Fenugeek, Kale, Sunflower, Turnips
- Erosion Reduction
- Spring Triticale, Spring Barley, Spring Wheat, Sorghum Sudan, Chickpeas, Fenugreek, Pearl Millet, Annual Ryegrass

## HOW TO TEST FOR SOIL HEALTH

## WHAT IS THE NUTRIENT CONTENT OF YOUR SOIL CURRENTLY?

- CSU extension Soils test - \$35
- $\mathrm{pH}, \mathrm{EC}$, organic matter, nitrate, phosphorus potassium, zinc, iron, copper, manganese, boron and lime \& texture estimates
- CSU Manure, Compost, and Potting Soil Analysis (For soil amendments only) - \$48 per sample
- $\mathrm{pH}, \mathrm{EC}$, organic matter, ammonium, nitrate, phosphorus, potassium, zinc, iron, copper, manganese, \% lime, dry matter, C:N ratio, Total N)
- NRCS soil health bucket - Free
- Soil texture, pH , nitrate, phosphate and potassium, organic matter, bulk density, infiltration, water content, porosity, respiration, aggregate stability, roots and pores, Solvita soil health test,
- Ward Laboratories Inc - \$50-60 - Kearney, NE - (800) 887-7645 https://www.wardlab.com/contact.php
- \$50 - The Haney Test - This test examines total organic carbon and total organic nitrogen to determine a C:N ratio used to make general cover crop recommendations. This test also includes a 24 hour CO2 soil respiration test to look at microbial biomass and potentially mineralizable nitrogen.
- \$60 - PLFA - Test Soil biological testing at Ward Laboratories is conducted by analyzing phospholipid fatty acids, or PLFA. PLFA gives a representation of living soil microbial biomass and allows us to identify the presence or absence of various functional groups of interest through known PLFA biomarkers. PLFA is a snapshot of soil community structure and abundance at the time of sampling. As environmental conditions such as temperature and moisture change so does the microbial community. This ability of the soil microbial community to change provides producers with a tool to compare agricultural management techniques with respect to overall better microbial community health.
